                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the amino acid sequence of the N-terminal, i.e. the extracellular, domain of novel human transmembrane activator and CAML-interactor (TACI) protein (see AAW75783). TACI is a lymphocyte receptor protein that is involved in the calcium activation pathway. It is normally present in B-lymphocytes, and to a much lesser extent in immature T-lymphocytes, and transmembrane extent compectifically regulate B cell responses without affecting T cell activity. The extracellular domain of TACI functions as a binding site for a ligand that stimulates the activation (see AAW75784) of Inducing the binding of the C-terminal portion (see AAW75784) of TACI to the N-terminal domain of CAML. A recombinant form of the extracellular portion of TACI acts as a dominant-negative or blocking agent and acts to suppress the immune system. It can be used to treat or prevent autoimmune disease, graft rejection or graft versus host disease. The extracellular region is also used in a claimed method for identifying a ligand for TACI, in which binding of a candidate molecule is determined by detecting cellular activation of the AP-1, CAMP or NF-KB pathway, of NF-AT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for inhibiting TACI (transmembrane cativator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering protein (BCMA) activity in a mammal. The method comprises administering comprises in the tracellular consensus region of TACI, BCMA, or the TACI/CE EAMLY ligand), having the consensus region of TACI, BCMA, or the TACI/CE EAMLY ligand), having the consensus region of TACI, BCMA, or the TACI/CE EAMLY region of TACI or BCMA. The method is useful for inhibiting activity of TACI or BCMA in a mammal which is useful for treating B-cell or T-cell clamphoproliferative disorders, one or more solid tumours such as lung, CE gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI/CE antagonists are useful for treating inflammation and immune function classes such as diarrhoea, psoriasis, allergies, pneumonia, atopic disease such as diarrhoea, psoriasis, allergies, pneumonia, atopic classes such as diarrhoea, psoriasis, allergies, pneumonia, atopic classes, drug and insect sting allergy, inflammatory bowel disease (activations), fungal, bacterial, protozoal and vizal infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence

The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA.

                                                                                                                         á
                                                                                                                                                                                                                                                                 is normally present in B-lymphocytes, and to a much lesser extent chi immature T-lymphocytes, and can therefore be targetted to specifically regulate B cell responses without affecting T cell countries of the certaing that the season and the targetted to specifically. TACI cDNA (see N57328) was isolated from a B-lymphocyte chi the C-terminal (see AAW75784) and N-terminal (see AAW75785) fragments of TACI, recombinant DNA constructs, unicellular hosts, and cantibodies to TACI protein. Methods are claimed for identifying a ligand for TACI and for identifying immunosuppressive drugs that celectively block the action of B lymphocytes without affecting conducted to provide immunosuppression, e.g. for treating infections or cancers. It can be blocked to provide immunosuppression, e.g. for treating cutcimmune and inflammatory conditions such as immune complex autoimmune and inflammatory conditions such as immune complex induced vasculitis, glomerulonephritis, haemolytic anaemia, conversed to the conditions of the conditions are chief and hyperacute xenograft rejection, cancer or pretent conditions, cancer or careful cancer of the condition, cancer or careful cancer of the conditions of the condition, cancer or careful cancer of the careful cancer of the careful cancer or carefu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the human neutrokine-alpha binding (NAR) protein designated TR17. TR17 has cytostatic, immunosuppressive, noutropic, neuroprotective, antiviral, antiallergic, hepatotropic, antidiabetic, antiinflammatory, antiulcer, cardiant and ophthalmological activities and can be used in gene therapy. The TR17 protein and antibodies are useful for treating and diagnosing immunodeficiency disorders and autoimmune disorders. The TR17 polypeptides, polynucleotides, antibodies, agonists are used for treating various other diseases defined in the specification and as research tools for studying the phenotypic effects that result from inhibiting TR17/TR17 ligand interactions on various cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Fig 1; 398pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid encoding a neutrokine-alpha receptor (NAR) such as TR17, useful for producing TR17 protein which is used in the treatment and diagnosis of autoimmune and immunodeficiency disorders -

renal disease, graft versus host disease, administering a BR43x2, TACI or BCMA extra Inhibiting ztnf4 activity in a mammal, to treat autoimmune diseases, renal disease, graft versus host disease, and inflammation, comprise BCMA extracellular domain polypeptide

Disclosure; Page 149-150; 175pp; English.

The present sequence represents a human transmembrane activator and CC CAML-interactor (TACI) receptor. TACI is a tumour necrosis factor (TNF) Creceptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI Or BCMA (a related B cell protein) receptor contain a cysteine rich CC domain, and are used for inhibiting ztnf4 activity. Ztnf4 is a TNF CC ligand. They may also be used for inhibiting BR43x2, TACI or BCMA CR receptor-ligand engagement associated with activated or resting B CC lymphocytes, effector T-cells, or with antibody production. The CC antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, mysathenia gravis, multiple sclerosis CC emphrysema, end stage renal failure, and BR43x2, TACI or BCMA CR receptor-ligand engagement is associated with asthma, bronchitis, CC emphrysema, end stage renal failure, glomerulonephritis, vasculitis, cnephritis, prelonephritis, renal neoplasms, multiple myelomas, lymphomas, CC impunosuppression, graft rejection, graft versus host disease, joint CR pain, swelling, anaemia, or septic shock. BR43x2, TACI and BCMA CC polypeptides, fusions, antibodies, agonists or antagonists can be used CC threat hypertension, renal artery stenosis, or occlusion, and or renal emboli.

                                                                                                              The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumour necrosis factor) especially TALL-1, ARRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and ARRIL expression or activity. TALL-1 and ARRIL antagonists are used to block the interaction between AFRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, mycloma, cancers of lung and colon and antoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human

                      The present sequence is a human tumour necrosis factor receptor (TACI) protein. TACI (Transmembrane activator and calcium-signal modulating cyclophilin ligand (CAML)-interactor) forms a complex with neutrokine alpha polypeptide (TACI-Ligand). The antagonist or agonist of TACI/TACI-L complex is useful for modulating an intracellular signalling cascade mediated by TACI/TACI-L complex. Antagonists of TACI/TACI-L complex are used to inhibit the interaction between TACI and TACI-L for therapeutic purposes to treat tumour and tumour metastasis and to combat therapeutic purposes to treat tumour and tumour metastasis and to combat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tumour necrosis factor receptor; TNF; autoimmune disease; diabetes; calcium-signal modulating cyclophilin ligand; CAML; viral infection; neutrokine alpha polypeptide; TACI-Ligand; TACI-L; cytostatic; therapy; neuroprotective; antidiabetic; antiviral; antiinflammatory; tumour; antiarthritic; antirheumatic; immunosuppressive; multiple sclerosis; rheumatoid arthritis; graft rejection; inflammation; cell proliferation; rheumatoid arthritis; graft rejection; inflammation; cell proliferation;

CC factor (TWF) delta and TWF epsilon proteins, and the polynucleotide
CC sequences encoding them. The proteins are useful for modulating
CC immunoglobulin production or for modulating proliferation of B-cells.
CC The sequences of the invention are useful for treating diseases or
CC diseases (e.g. systemic lupus erythematosus (SLE), acquired
CC diseases (e.g. systemic lupus erythematosus (SLE), acquired
CC (e.g. chronic lymphocytic leukaemia (CLL), multiple myeloma,
CC (disorders, microbial infections (e.g. viral, bacterial), parasitic
CC offictions, nephritis, bone disease (e.g. osteoporosis), atherosclerosis,
CC pain, cardiovascular disorders (e.g. nocardial infarction, stroke),
CC diseasely, graft versus host disease, wound healing, haematopoietic cell
CC diseasely, graft versus host disease, wound healing, haematopoietic cell
CC diseasely or disorders (e.g. alzheimer's disease, Parkinson's
CC diseasely or disorders (e.g. alzheimer's disease), asthma),
CC diseasely or disorders (e.g. alzheimer's diseases or disorders (e.g. anaemia), inflammatory disorders (e.g. asthma),
CC diseasely or disorders associated with various mucous membranes of the
CC proteins are also useful as a vaccine adjuvant that enhances immune
CC responsiveness to specific antigens. The present sequence for human
CC (IgG) Fc fusion protein is used in the examples of the present

(I) has cytostatic, immunosuppressive, dermatological, antiinflammatory, neuroprotective, antidiabetic, antiarthritic, antiasthmatic, nephrotropic and hypotensive activities, and can be used in gene therapy. (I) can be used for inhibiting, in a mammal, the activity of a ligand that binds Ztnfr12 (e.g. ZTNF4), for treating disorders and diseases associated with B lymphocytes, activated B lymphocytes or resting B lymphocytes, and for inhibiting the proliferation of tumour cells. (I) is useful for treating autoimmune disorders such as systemic lupus erythematosus, myasthemia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, rheumatoid arthritis, bronchitis, emphysema and end stage renal failure or renal disease such as glomerulonephritis, vasculitis, chronic lymphotic and propertical and wellowed and stage renal failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            leukaemia, nephritis, and pyelonephritis, and for treating renal meoplasms, multiple myelomas, lymphomas, light chain neuropathy, or amyloidosis, hyperdension, large vessel diseases, graft-versus host disease, graft rejection and Crohn's disease. (I) is useful for modulating the immune system, for regulating B cell responses and development, for modulating development of other cells, antibody production and cytckine production, and for modulating T and B cell communication. The present sequence represents a protein which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-NOV-2000; 2000U$-246449P.

                                                                                                   Ś
                                                                                                                                                                                                                                   This sequence represents the human transmembrane activator CAML (C) interactor protein (TACI). The invention relates to treating a mammal for c a condition associated with undesired cell proliferation (e.g. a solid CU tumour, or reducing the size of a solid tumour located on or in a mammal) comprising administering a transmembrane activator CAML interactor CC comprising administering a transmembrane activator CAML interactor CC catles (TACI) reagent. The TACI reagent has cytostatic and vulnerary CC catles of a condition associated with undesired cell proliferation (e.g. CC cancer such as renal cell cancer, Kaposi's sarcoma, breast cancer, CC sarcoma, ovarian carcinoma, rectal cancer, throat cancer, melanoma, colon cancer, bladder cancer, mastocytoma, lung cancer, mammary adenocarcinoma, pharyngeal squamous cell carcinoma, gastrointestinal cancer or stomach CC cancer). The method is also useful for treating cellular cancer. The TACI reagent of the invention can extend mean survival time of a mammal in the absence of administering the TACI reagent. The TACI reagent also creduces the size of the tumour by 25% or more.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAU75408
            The invention describes a multimeric human tumour necrosis factor (TNF) cdelta or epsilon protein (I). (I) or a composition containing them (II) care useful for modulating immunoglobulin production or proliferation of B cells. (I) or (II) is useful: for treating a disease or disorder of the immune system, preferably an autoimmune disease (e.g. Sjogren's syndrome, containing the munodeficiency (CVID)); an immunodeficiency e.g. acquired immunodeficiency (CVID)); an immunodeficiency e.g. acquired immunodeficiency syndrome (AIDS); cancer of the immune system (e.g. Hodgkin's disease, non-Hodgkin's the diseases and treatment or prevention of cancer. lymphoraliferative disease (e.g. stroke) allergy, inflammation, cardiovascular disease (e.g. stroke), allergy, inflammation, neurodegenerative disease (e.g. stroke), allergy, liver disease (e.g. stroke), asteroiss; septic shock, and consert send useful condities, asteroisslerosis; for promoting and condities, ulcerative colities, asteroisslerosis; for promoting and condities, ulcerative colities, asteroisslerosis; for promoting and condities, ulcerative colities, asteroisslerosis; for promoting and condities and disease (e.g. stroke).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tumour necrosis factor; TNF; cytostatic; arteriosclerosis; analgesic; cerebroprotective; nootropic; neuroprotective; heatotropic; immunoglobulin production; B cell proliferation; immunosuppressive; immunoglobulin production; B cell proliferation; immunosuppressive; HTV; human immunodeficiency virus; autoimmune disease; immunodeficiency; CYUD; non-Hodgkin's disease; common variable immunodeficiency; CYUD; non-Hodgkin's lymphoma; AIDS; acquired immunodeficiency virus; cancer; multiple myeloma; CLL; chronic lymphocytic leukaemia; lymphoproliferative disorder; bacterial infection; viral infection; osteoporosis; atherosclerosis; pain; cardiovascular disorder; stroke; allergy; Alzheimer's disease; neurodegenerative disease; inflammation; liver disease; cirrhosis; cardiomyopathy; diabetes; asthma; psoriasis; glomerulonephritis; ulcerative colitis; anglogenesis; septic shock; wound healing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Yu G,
                                                                                                                                                                                                                                                                                                                                            Example 29; Page 341-342; 344pp;
                                                                                                                                                                                                                                                                                                                                                                                                     Novel multimeric human tumour necrosis factor delta or epsilon protein useful for treating cancer, immune system disorders, infection, cardiovascular disorders, liver disease, cardiomyopathy, diabetes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC protein (BCMA) activity in a mammal. The method comprises administering CC a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA in a mammal which is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. ARRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriastis, allergies, pneumonia, atopic CC diseases such as diarrhoea, psoriastis, allergies, preumonia, atopic CC diseases for an diarrhoea, soriastis, allergies, preumonia, atopic CC disease, respiratory allergic disease (asthma, hypersensitivity lung CC disease), drug and linsect sting allergy, inflammatory bowel disease (Crobn's disease, colitis), scleroderma, autoinmune disease (multiple colerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, CC bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the aking or rease "he recent according to the process of the colerosis, cancer control to the colerosis, cancer control to the colerosis of the colerosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 166;

                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition (I) comprising AGP-3 receptor (C tumour necrosis factor ligand family member) related protein (II) cattached to a vehicle protein. (I) is useful for modulating AGP-3-related CC activity in mesenteric lymph nodes (MIN) of a mammal. (II) is useful in CC related to AGP-3R-related protein and for identifying compounds (C agonists or antagonists) that interact with AGP-3R proteins. (II) is CC also useful for identifying intracellular proteins that interact with AGP-3R proteins (II) is CC the respective cytoplasmic domains by yeast two-hybrid screening CC process. (II) is involved in B cell growth, survival and activation particularly in lymph node, spleen, and Peyer's patches. AGP-3R CC agonists and antagonists identified using (II) are used for modulating CC agonists and are used to treat diseases characterised by inflammatory processes or deregulated immune response such as CC lupus, etc. (II) is also useful in the production of hybridoma cells which are derived from B cells, which involves treating the hybridoma cells which are derived from B cells, which involves treating the hybridoma cells which are derived from B cells, which involves treating the hybridoma cells which are derived from B cells, which involves treating the hybridoma cells which are derived from B cells, which involves treating the hybridoma cells cells with (II), (II) is useful in the treatment of inflammatory conditions of joints, e.g., rheumatoid arthritis, osteoarthritis, etc. (C conditions of joints, e.g., rheumatory buseful for treating the hybridoma cells catheril for treating the hybridoma cells catheril for treating the first product of lateral sclerosis (ALS), Alzheimer's disease, catheril catheril catheril catheril character indured the first production of hybridoma cells catheril ca
                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               glomerulonephritis, inflammatory bowel disease, ischaemic injury including cerebral ischaemia, multiple myeloma, multiple sclerosis, osteoporosis, Parkinson's disease, pain, reperfusion injury, septic shock, etc. The nucleic acids are also useful for developing transgenic animals expressing (II), which are useful for producing the polypeptides and for the study of in vivo biological activity. The present sequence represents the amino acid sequence of human AGP-3 related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Composition, useful for identifying modulator of receptor for treating asthma and glomerulonephritis, comprises AGP-3 (tumour necrosis factor ligand family member) receptor and encoding nucleic acids -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-FEB-2001; 2001WO-US04568.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-NOV-2001

This sequence represents the protein of an N-terminus FLAG-tagged human CC full length TACI from pJST552 (FLAG-tagged human APRIL-R2 (a proliferation inducing ligand)). The invention relates to treating a CC mammal for a condition associated with undesired cell proliferation (e.g. a solid tumour, or reducing the size of a solid tumour located on or in a CC mammal) comprising administering a transmembrane activator CAML interactor protein (TACI) reagent. The TACI reagent has cytostatic and CC vulnerary activity. Treating a mammal (e.g. human, cow, horse, dog, CC mouse, rat or cat) for a condition associated with undesired cell CC proliferation (e.g. cancer such as renal cell cancer, Kaposi's sarcoma, CC melanoma, colon cancer, bladder cancer, mastocytoma, lung cancer, mammary CC adenocarinoma, pharyngeal squamous cell carcinoma, gastrointestinal CC cancer or stomach cancer). The method is also useful for treating CC cancer or stomach cancer) activitis, post-surgical scarring and lung, liver CC and uterine fibrosis. The TACI reagent of the invention can extend mean CC and mammal in the absence of administering the TACI reagent. The TACI cancer also confident to the mean survival time of a mammal by 25% as compared to the mean survival time of CC reagent also reduces the size of the tumour by 25% or more.
